

| Active Ingredient | Description & Comments | Rodenticides |
|------------------------|---|---|
| Brodifacoum | <ul style="list-style-type: none"> - Single-feed, anti-coagulant - Highly active in rodents as well other non-targeted animals (including birds). - Can be used in everyday rotation, but must be kept away from non-targets. - Do not use if exposure to non-targets is a concern. | <ul style="list-style-type: none"> - Jaguar - D-Con - Havoc - Talon |
| Bromadiolone | <ul style="list-style-type: none"> - Single-feed, anti-coagulant - Invented by Liphatech - Excellent active to use in your every day rotation (3-4 months). - This active is effective year round. - Boothill Pellets are registered for baiting rat burrows. | <ul style="list-style-type: none"> - Boothill - Hawk - Just One Bite |
| Bromethalin | <ul style="list-style-type: none"> - Acute toxin - A quick kill & cleanout product, use only when competing food is not available. - When used in the right conditions, this active can knock down a heavily infested area within 24-48 hours. - Not recommended to be used more than 1 month at a time. - Sub lethal dose may cause bait shyness. | <ul style="list-style-type: none"> - Gunslinger - Top Gun - Assault - CyKill - Rampage |
| Chlorophacinone | <ul style="list-style-type: none"> - 1st Generation, multiple-feed anti-coagulant - Invented by Liphatech - Liphatech uses this active primarily in their field products (ground squirrels, prairie dogs, etc.) | <ul style="list-style-type: none"> - AC 90 - Rozol |
| Cholecalciferol | <ul style="list-style-type: none"> - For use in organic operations - Produces hypercalcemia, which results in systemic calcification of soft tissue. - Active is not as effective as anti-coagulants but is one of the few options for organic baiting. | <ul style="list-style-type: none"> - Agrid 3 - Quintox |

| Active Ingredient | Description & Comments | Rodenticides |
|-------------------|--|---|
| Difethialone | <ul style="list-style-type: none"> - 2nd Generation, single-feed anti-coagulant - Invented by Liphatech - "NEW" Soft bait formula (FastDraw) is the most effective & palatable bait on the market. | <ul style="list-style-type: none"> - FastDraw - Hombre |
| | <ul style="list-style-type: none"> - FastDraw, excellent for high temperatures and summer baiting. - FastDraw is the best option when trying to knock down a rodent population while competing food sources are available. - Formulated at half the active ingredient of competing baits for superior palatability - Highly effective active for your everyday rodenticide rotation. | |
| Diphacinone | <ul style="list-style-type: none"> - 1st Generation, multiple-feed anti-coagulant - Works in 4-6 days. | <ul style="list-style-type: none"> - JT Eaton Bait Blocks - Tomcat - Ramik |

****All anti-coagulant baits cause rodent deaths 4-6 days after consuming a lethal dose.**
